Executive Summary

This report explains the biggest website issues in simple language.

Key result: Overall score 75/100. The site is judged on speed, SEO, accessibility, structure, and trust.

Overall Score

This is the headline score for the website quality.

Key result: 75/100

Issue: Score is below a strong marketing standard

What it means: The website is not yet performing at the level expected for a strong online presence.

Why it matters: A lower score usually means slower loading, weaker visibility, and fewer conversions.

Where to fix it: undefined

How to fix it: undefined

Top Priority Fixes

These are the highest-impact items to address first.

Key result: Page title looks strong · Improve the meta description · Improve security headers · Convert legacy images to modern formats · Add Open Graph and Twitter card metadata

Performance / Core Web Vitals

This section covers how quickly the site feels when a visitor arrives.

Key result: Performance score 76/100

Issue: Loading speed needs attention

What it means: The site may feel slow or heavy on mobile devices.

Why it matters: Slow pages increase bounce rates and reduce trust.

Where to fix it: undefined

How to fix it: undefined

SEO Basics

These are the basics that help search engines understand the page.

Key result: Title, description, and heading structure are reviewed. SEO score NaN/100

Issue: Core SEO signals are incomplete

What it means: The page may not clearly explain its topic or purpose to search engines.

Why it matters: Clear metadata helps search results and click-through rates.

Where to fix it: undefined

How to fix it: undefined

Advanced SEO

This section checks technical signals such as canonical tags and metadata.

Key result: Advanced SEO score 86/100

Issue: Technical SEO issues may be present

What it means: Search engines may have trouble choosing the correct page version.

Why it matters: This can weaken search performance when similar pages exist.

Where to fix it: undefined

How to fix it: undefined

Content Quality

This section reviews whether the page has enough useful content for visitors and search engines.

Key result: 3938 words reviewed

Issue: Content may be too thin

What it means: The page may not provide enough depth for the topic.

Why it matters: Stronger content helps both readers and search engines.

Where to fix it: undefined

How to fix it: undefined

Image Formats / WebP Recommendation

This section looks at whether images are modern and efficient.

Key result: Detected formats: total, modern, legacy, counts, needsWebp, needsModernFormats, priority, estimatedSavingsKb, estimatedSavings, message, modernCount, legacyCount

Issue: Images use older formats

What it means: Some images are JPG or PNG instead of WebP or AVIF.

Why it matters: Modern formats usually load faster, especially on mobile.

Where to fix it: undefined

How to fix it: undefined

Structured Data

Structured data helps search engines better understand the page and business.

Key result: Structured data blocks detected: 1

Issue: Structured data is missing or incomplete

What it means: Search engines have less machine-readable information about the page.

Why it matters: Structured data can support richer search understanding.

Where to fix it: undefined

How to fix it: undefined

Social Preview

This section checks whether links look polished when shared on social networks.

Key result: Social preview completeness: 70%

Issue: Social sharing metadata is incomplete

What it means: Shared links may show weak or missing previews.

Why it matters: Better previews improve trust and click-through rates.

Where to fix it: undefined

How to fix it: undefined

Local SEO

This section looks for location-based trust signals.

Key result: Local business signals identified: No

Issue: Local SEO signals are not fully present

What it means: The page may not clearly show local business details.

Why it matters: This matters when local customers are searching.

Where to fix it: undefined

How to fix it: undefined

Semantic Accessibility

This section reviews whether the page is easier to navigate and understand.

Key result: Accessibility score 85/100

Issue: Accessibility structure can be improved

What it means: Some page elements may be hard to understand for screen readers or keyboard users.

Why it matters: Better structure improves usability and trust.

Where to fix it: undefined

How to fix it: undefined

AI Readiness / Generative Search Readiness

This section looks at whether the page is structured in a way that helps modern search and AI experiences.

Key result: AI readiness score 100/100

Issue: Generative-search readiness could be stronger

What it means: The page may not provide enough structured and clearly explained context.

Why it matters: This can affect how well the page appears in modern AI-assisted discovery.

Where to fix it: undefined

How to fix it: undefined

Technology Stack

This section shows the main technologies detected on the site.

Key result: WordPress

Security

This section looks at basic trust and security signals.

Key result: Security score 14/100

Issue: Security signals should be reviewed

What it means: The site may be missing some basic trust indicators.

Why it matters: Trust signals matter for conversions and reputation.

Where to fix it: undefined

How to fix it: undefined

Competitor Comparison

This section compares the main website with the competitor.

Key result: Your score 75/100 vs competitor 92/100
