

FINAL REPORT

GOOD - GENERATED 08/07/2026, 00:05:00

92^{/100}

Overall score uses strict weighting. Core Web Vitals and Google Lighthouse scores count strongly, with local technical checks, W3C validation, SEO, images and trust signals included.

99

01 PERFORMANCE

Google speed and Core Web Vitals score.

77

02 TECHNICAL

Local HTML, links, headings and structure.

42

03 VALIDATION

W3C HTML validation quality.

13

04 IMAGES

Legacy JPG or PNG images detected.

WHAT THIS SCORE MEANS

This report is generated from the complete audit data, not from a visual screenshot. This means hidden, tabbed and scrollable sections can still be included in the PDF.

How to fix it: Start with the priority roadmap, then fix Core Web Vitals, image formats, metadata, W3C validation issues and security headers.

PRIORITY ROADMAP

WHAT TO FIX FIRST

COMPETITOR COMPARISON

No competitor URL was provided, so this report focuses only on the audited website.

How to fix it: Add a competitor URL when running the audit if you want a side-by-side comparison.

PRIORITY ROADMAP

01 PAGE TITLE LOOKS STRONG

The title is present and within a good SEO range.

02 META DESCRIPTION LOOKS STRONG

The meta description is present and within a good SEO range.

03 ADD ALT TEXT TO IMAGES

8 image or images are missing alt text.

04 IMPROVE SECURITY HEADERS

Add missing headers like Content Security Policy, Strict Transport Security, X Frame Options and Referrer Policy.

05 CONVERT LEGACY IMAGES TO MODERN FORMATS

The page still uses legacy image formats that can be improved with WebP or AVIF for smaller files and better performance.

06 ADD OPEN GRAPH AND TWITTER CARD METADATA

Social preview metadata is incomplete and can reduce the quality of link previews.

07 ADD LOCALBUSINESS SCHEMA

The page shows local business signals, so LocalBusiness schema can improve local search clarity.

08 W3C VALIDATION HAS NO CRITICAL ERRORS

The Accessibility Truth Check did not find critical W3C HTML validation errors.

PRIORITY ROADMAP

WHAT TO FIX FIRST

09

CORE WEB VITALS WEIGHTED SCORE

The weighted Google score is 99/100. Mobile results are weighted more heavily than desktop.

10

FINAL AUDIT SCORE

The final score is 92/100. This version uses stricter scoring so weak Core Web Vitals and W3C validation issues reduce the total score more strongly.

BUSINESS SCORES

SEO, TRUST, EXPERIENCE AND CONVERSION

76**SEO**

Search clarity, metadata and structure.

43**TRUST**

Security, credibility and confidence signals.

77**EXPERIENCE**

Speed, usability, links and image quality.

68**CONVERSION**

How well the site can turn visitors into leads.

HOW TO IMPROVE THESE BUSINESS SCORES

These scores translate technical audit data into practical business risk: discoverability, user confidence, usability and lead generation.

How to fix it: Improve metadata, page speed, security headers, accessible labels, clear calls to action and structured data.

IMAGE FORMATS

WEBP COMPRESSION PRIORITY

NEEDS IMAGE OPTIMIZATION

13 image or images should be converted to WebP or AVIF.

How to fix it: Convert large JPG or PNG photos to WebP or AVIF, compress them, and replace the heavy versions in the page builder or media library.

WARNINGS	30
----------	----

WHY W3C VALIDATION MATTERS

HTML validation issues can affect accessibility, maintainability and how reliably browsers or tools understand the page.

How to fix it: Fix the first repeated template errors in the theme or page builder first. One template issue often creates many validation messages.

REFERRER POLICY	Missing
-----------------	---------

PERMISSIONS POLICY	Missing
--------------------	---------

HOW TO IMPROVE SECURITY SIGNALS

Missing security headers do not always mean the site is hacked, but they reduce browser-level protection and trust quality.

How to fix it: Enable common security headers such as Content-Security-Policy, X-Frame-Options, X-Content-Type-Options, Referrer-Policy and Permissions-Policy in hosting or server config.
